Put your FAT TO USE

One of the most distinctive features of aging is loss of volume or fullness of the soft tissues. In the face, this is associated with deep folds near the corners of the mouth and nose, and a hollowing out of the cheeks. Fat injection treatments are long lasting and an effective remedy using your body's own resources. Fat is usually harvested from the abdomen or thighs, specially cleansed and then re-injected in fine quantities. So what are you waiting for, put your fat to good use!
